Innovative production solutions for delicate material

We take over planning and entire automation of any thin film plant. Our front and back end technology includes transport, washing, cutting and stacking equipment, accumulators, robot handling, inspection systems, laser processing and various other equipment for the smooth treatment of the sensitive substrates. Simulation, MES and host systems to control line functioning determine and synchronise the production process.

Exhibition focuses:

- Ultra-sonic welding of junction boxes and holders at solar modules such as welding of holders for facade copings and fittings
- System for laser edge deletion of thin-film solar modules
- Contact-free gripper system for flat glass and solar modules
- Handling and accumulator technology for flat glass and thin-film solar lines with optimum clean room conditions

Please visit us at Glasstec, Hall 15 Booth B42.
